Installation Kits

Installation Kits

Our Kit is a product created to meet the most diverse needs. Available in various formats, it can also be customized if necessary.

In particular, in the large kit it is possible to redesign the interior spaces according to the needs in order to contain a certain number of connectors rather than another set of all the necessary tools.

In this kit, in fact, the internal separators are all removable and repositionable. Practical and ergonomic, the Telecom & Security Kit is the smart solution for our installers.

Small Kit
